

Provincial Park Society

Team Building Experience

Bring your group and enrich your bond while doing good for Fish Creek Provincial Park!

Weed Pull

Weed pulling is crucial for park maintenance as it helps control invasive species, preventing them from outcompeting native plants for resources. This practice promotes biodiversity and ensures the health and sustainability of native ecosystems.

Grassland Restoration

We expanded the Heritage Grasslands at Bow Valley Ranch restoring 55,000 m² of native vegetation. This event invites participants to remove invasive species, create or maintain solarization beds, and introduce native flora to help regenerate natural ecosystems.

Tree Wrapping

Last season we have wrapped nearly 700 poplars. This activity involves installing or removing wire cages to selectively deter wildlife from predating on vegetation. It helps preserve healthy trees and increase biodiversity of time.

Riparian Restoration

To date we have 23 areas, encompassing about 20,500 m². This activity invites participants to construct a restoration site by installing fencing, remove invasive species, mulching, and water as well as plant a variety of native plant species.

Park Clean Up

Each year, over 300 bags of litter are collected along pathways and shorelines in Fish Creek. If you love to keep the natural beauty of the environment, we invite participants in a self-directed experience to collect garbage throughout the park and help protect our truly unique urban space.
